

### **Education Background**

Master of Power system and its automation, Xi'an University Of Science And Technology, 2009  
Bachelor of Communication Engineering, Information Engineering University, 2006

---

### **Professional Qualifications**

P.R.C Patent Attorney

---

### **Language Skills**

Mandarin / English

## **► Professional Experience**

Since graduating from the Power System and Automation major at Xi'an University of Science and Technology in 2009, Yu Yue has been engaged in research and development related to power systems in large state-owned and foreign-funded enterprises for many years, accumulating rich experience in distribution systems, software development, and communication. Since engaging in patent agency work, he has served clients and completed multiple patent applications.

During the research and development work in the field of power systems, he has completed a significant amount of technical research and software development in areas such as distribution management systems, distribution network simulators, fault location and isolation, reactive power optimization, and power system visualization. He has also participated in multiple technology projects, among which the distribution network energy-saving transformation auxiliary decision-making system won the third prize for scientific and technological progress from State Grid Corporation of China. During this period, we conducted joint research and development with many institutions, such as Tsinghua University, North China Electric Power University, Beijing Jiaotong University, IBM, etc.
